- [LogBookApp].Setup.msi (*where [LogBookApp] is the product name*)

(Continued on next page)

Release Notes – 2.0.5.6

- This release contains new user interface styles and artwork specific to Maersk.

Previous Release Notes – 2.0.4.4

- The application version is now included in the PDF export header.
- Fixed various bugs that were causing disk space to be wasted:
 - Ensure temporary folders are always cleaned up during archive synchronisation.
 - Don't perform database compression as often – this produces smaller differential backups.
 - Ensure clean-up of old backups recovers and continues if an error is encountered.
